

CableLOCK™

iMac

Heavy-Duty Security for the Apple iMac

Product Code: CL011

The iMac **CableLOCK™** system uses an 11mm diameter heavy-duty steel cable, which provides an excellent physical and visual deterrent to theft. This cable is the strongest on the market, and secures the iMac through the hole in the stand.

Conventional 5mm diameter laptop-style security cables are being pulled from the iMacs' built-in 'security slots' or are being cut in less than a second. Even 6mm and 9mm diameter security cable systems are not substantial enough to protect these desirable computers.

The mouse and keyboard can be secured using our cable trap. (Specification of cable kit components may vary).

Features & Benefits

- Heavy-duty cable kit for Apple iMac
- 1800mm x 11mm diameter high tensile steel cable
- Keyboard, mouse and monitor cable traps
- Loop bracket for looping cable around desk
- 50mm high-security shackleless padlock in keyed alike
- Easy to install and reusable
