

CableLOCK PRO™ iMac

Professional Cable Kit for iMac and LED Cinema Displays

Registered Design

No. GB 4018356

Product Code: CL090 / CL010-27

The iMac **CableLOCK PRO™** system uses an 11mm diameter heavy-duty cable, which provides an excellent physical and visual deterrent to theft. This kit has been specifically designed to complement Apple's ethos of high quality design, and provides maximum security as well as an attractive yet secure locking system when compared to all other kits currently available.

The 11mm diameter steel cable is the strongest on the market, and secures the iMac through the hole in the stand via its unique Stand Anchor Clamp. The Stand Anchor Clamp is available with anodised silver finish. Mouse and keyboard cables can also be secured through the Stand Anchor Clamp.

Extensive research has shown that conventional laptop style cables are being pulled from the laptop slot provided or that these cables are being cut in less than a second. Research has also shown that 6mm and 9mm diameter security cable systems are not substantial enough to protect these expensive items of equipment.

Features & Benefits

- Heavy duty security cable kit for iMacs and LED cinema displays
- 1500mm x 11mm diameter steel cable for maximum security
- Unique attractive 'Stand Anchor Clamp'
- Secures keyboard, mouse and power cables
- High-security 50mm shackless padlock – keyed alike
