

iMARK™

Product Code: iMK-L130 /

iMK-A140 /

iMK-F150

Property Marking Solutions for all Apple Hardware

The **iMARK™** is a professional anti-theft tagging system which permanently fixes to all surfaces including plastic and metal. Three types are available: Laminated, Acrylic and Flex. The Laminated faceplate is a very thin printed surface. Acrylic is a thicker plastic material that is laser-engraved. Flex is a printed label with 3D coating.

All labels consist of a self-adhesive security faceplate with company details, logo, serial number and/or barcode. Underneath each security plate is a security tag, which is bonded to the surface of the equipment. The security tag will include text of your choice such as 'STOLEN' and telephone number/post code. If the security faceplate is removed it will leave the bonded security tag on the equipment. Any attempt to remove the tag will deface the equipment, thus making resale suspicious.

iMARK™ is available in small and large sizes:

(Small is 10mm x 30mm or 15mm x 35mm, large is 18mm x 55mm or 25mm x 50mm).

Features & Benefits

- Anti-theft tagging system affixes to equipment
- Self adhesive security faceplate with bonded security tag
- Powerful visual deterrent
- Quick and easy to apply
- Can include company name, logo, postcode, telephone number, barcode and/or sequential number
