

MiniLOCK™

Lockdown system for Mac Mini

Mac
Mini

Registered Design
No. 4016150

Product Code: ML060

The Mac Mini is the smallest Apple computer currently available, and due to its size and cost it is extremely desirable to thieves as it commands a high resale value on the open market. The new **MiniLOCK™** lockdown system has been specifically designed to fulfil the need for a discreet and high-tech security solution that complements the aesthetic design of the Mac Mini.

The **MiniLOCK™** lockdown system is a cost-effective solution for securing your Mac Mini computer. The unit can be screwed or bolted to the desk or worktop using the special high-security fixing bolt or fixed to the rear of a monitor via the VESA mounts.

The **MiniLOCK™** is constructed of 4mm hardened steel and is powder coated to provide a durable finish. The design of Mac Mini cover in the base requires no tools for removal of the memory. The design of the **MiniLOCK™** prevents memory theft. If attaching the Mac Mini to the rear of the monitor via the VESA mounts, an optional security cable kit will secure the unit and the monitor to the desk or an immovable object.

Features & Benefits

- Maximum security for Apple Mac Mini
- Discreet high tech security solution
- Prevents theft of memory
- Allows full cable access
- Allows full ventilation
- Secures keyboard, mouse and other cables
- Constructed using 4mm hardened steel
