

# ProLOCK™

# Mac Pro

Discreet lockdown system for Mac Pro

Patent Pending  
No. GB 1100416.5  
Product Code: PL030A

The Mac Pro has become the most sought after computer on the market, making them extremely desirable to thieves due to their high resale value. The unique ProLOCK™ lockdown system has been specifically developed to fulfil the need for a discreet and high-tech security solution for Mac Pro towers.

The ProLOCK™ does not impair the aesthetics of the Mac Pro, as it secures the computer through the feet in the base of the computer chassis. The ProLOCK™ is constructed using 3mm heavy gauge steel and can be bolted to the desk or floor. All units come with a high-security anti-tamper and anti-drill block lock.

It is possible to secure the mouse, keyboard and other cables at the rear of the unit. An optional rear-casing padlock can be provided to prevent unauthorised access to the valuable internal components, and an optional heavy-duty security cable can be added on either side of the unit to secure the LCD Cinema Display.

## Features & Benefits
