

# SecurePAD™

High bond adhesive cable anchor pad

# iPad

Registered Design

No. GB 4018357

Product Code: IPSP170

The iPad is the most revolutionary tablet computer on the market, making it extremely desirable to thieves. Due to its compact size, this valuable computer can be stolen in seconds. The iPad does not have a built-in 'security slot', and therefore cannot be tethered to an immovable object by using a conventional laptop security cable.

The **SecurePAD™** is a universal retrofit security pad with a built in 'security slot'. The **SecurePAD™** is fitted with 3M VHB (Very High Bonding) tape and is bonded to the rear of the iPad. Once fitted, simply insert your laptop security cable, turn and remove the key. This device can also be used to secure any piece of valuable equipment.

## Features & Benefits

- Discreet cable anchor point for Apple iPad
- Takes a conventional laptop security cable
- Low profile and compact
- Can be used to secure any item of equipment
- Choice of colours: Black, silver and red
- Easy to install
