

SecureStand™

iMac

Security Stand for Apple iMacs

Patent Pending
No. GB 1007444.1

Product Code: SS021 / SS027

The iMac is the ultimate all-in-one computer currently available, and due to its size and cost it is extremely desirable to thieves as it commands a high resale value on the open market. The new iMac **SecureStand™** has been specifically developed to fulfil the need for a discreet and high-tech security clamp for Apple iMacs. The clamp will also protect the valuable keyboard, mouse, power and FireWire cables.

The **SecureStand™** is constructed using 4mm hardened steel and is available in different sizes to cater for the complete iMac range. All units are easy to install and come fitted with a high-security anti-tamper and anti-drill shrouded lock.

Using a high-security single fixing point, the clamp can be permanently attached to a desk or worktop. This allows the unit to rotate, making it ideal for teaching and working environments. For added security, the iMac can be fixed in one position using a secondary fixing point. A security screw is provided to block unauthorised access to the memory slot on the underside of the iMac.

Features & Benefits

- Discreet high-security clamp for the Apple iMac
- Securely fixed to desk or worktop with single or dual fixing point
- Allows full rotation of unit
- Features a high-security anti-tamper and anti-drill lock
- Secures keyboard, mouse and power cables
