

SecureStand ECO™

iMac

Patent Pending
No. GB 1007444.1

Product Code: SS021ECO / SS027ECO

Security Stand for Apple iMacs

The iMac is the ultimate all-in-one computer currently available, and due to its size and cost it is extremely desirable to thieves as it commands a high resale value on the open market. The new iMac **SecureStand ECO™** is an entry level security clamp that has been developed for Apple iMacs. The clamp will also protect the valuable keyboard, mouse, power and FireWire cables.

The **SecureStand ECO™** is constructed using 4mm hardened steel and is available in different sizes to cater for the complete iMac range. All units are easy to install and come fitted with a locking peg and padlock.

The clamp can be permanently attached to a desk or worktop using a heavy duty bespoke locking system. This allows the unit to rotate, making it ideal for teaching and working environments. The iMac can be fixed in one position using a secondary fixing point. A security screw is provided to block unauthorised access to the memory slot on the underside of the iMac.

Features & Benefits

- Discreet high-security clamp for the Apple iMac
- Secures the iMac with a locking peg and padlock
- Securely fixed to desk or worktop with single or dual fixing point
